For Measuring Banner Updates.

ONE Day & Times only:

I will use a banner with current times of 9.30am & 10.30am as an example.

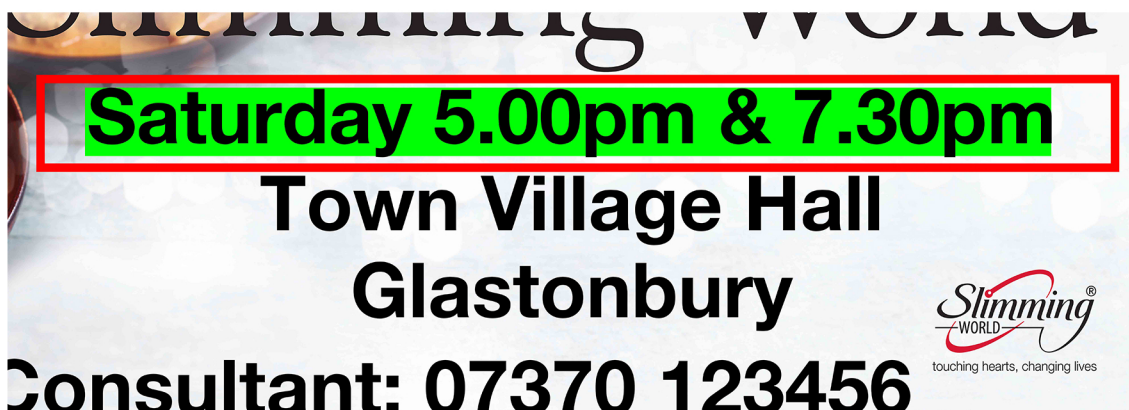

1. Measure the Height of the first Letter.

in this example it will be **Saturday 5.00pm & 7.30pm**

The standard size from SW is 4 - 4.5cm if your banner is not supplied by head office it wont be the same size.

2. Measure the width and height available for the new times.

You will need to measure from just before the S of the day up to the end of the banner or until you reach text or logo. I have boxed this in **RED** below.

Result:

S is 4.5cm tall

Width available 92cm - Height available 8cm
